Pocket Pets
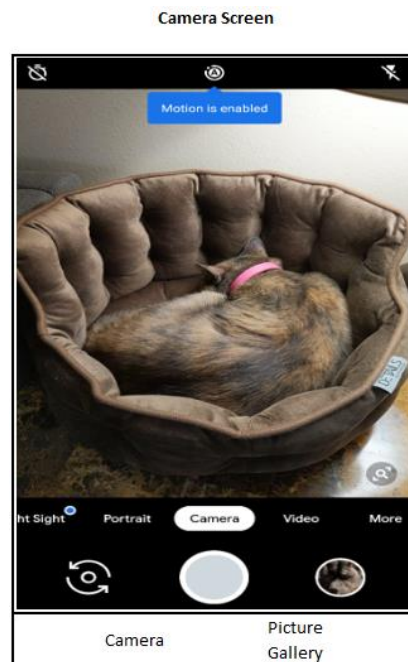

(Final App Project Write-up)

Overview

The Pocket Pets app is designed to let pet enthusiasts photograph their pets. That image is then saved to a gallery. This way the user will always be able to cherish their favorite photos of their pet and know exactly what they were doing at that time.

Wireframe

Below are the different pages the user will be able to access when they install the app on their phone. Briefly, those pages are camera screen, and the picture gallery. See below:

Camera Screen

Pictures Screen

Implementation

The application will likely require the use of a databas.. That, or the details about an image will be stored locally on the device. The application has access to the device's camera which is enabled through Cordova.
